

AVNEET KAUR PAMA

Software Engineer & Educator | K-12 Coding & STEM Instruction
Seattle, WA | avneetpama@gmail.com | (206) 366-5412 | [LinkedIn](https://www.linkedin.com/in/AviPama) | github.com/AviPama

PROFESSIONAL SUMMARY

Software engineer with a cybersecurity background (M.S. in IT Security, CompTIA Security+) and current hands-on experience teaching coding and STEM concepts to elementary school students. Combines real-world engineering fluency in Python, Java, and web technologies with proven ability to design lesson plans, simplify technical concepts for young learners, and drive measurable improvements in student comprehension. Seeking part-time, remote opportunities teaching coding, STEM, or general academic subjects to K-12 students.

TEACHING & TUTORING EXPERIENCE

Elementary Tutor | *West Woodland Elementary School, Seattle, USA*

June 2025 – Present

- Deliver one-on-one and small-group English instruction to elementary grade students, adapting lessons to individual learning styles and pace.
- Evaluate student assignments and track progress to drive measurable academic achievement.

STEM Instructor | *Kimball Elementary School, Seattle, USA*

Feb 2025 – June 2025

- Taught foundational STEM concepts to elementary grade students through engaging, hands-on instruction.
- Evaluated assignments and tasks, enhancing efficiency and supporting student achievement.

Teaching Assistant (Blockchain) | *Ontario Tech University, Canada*

Jan 2024 – April 2024

- Developed 12+ interactive lesson plans and integrated innovative tools to teach blockchain fundamentals, improving concept comprehension by 20% across 50+ students.
- Streamlined evaluation process for 200+ assignments, increasing grading efficiency and consistency.
- Provided personalized, one-on-one support to students struggling with technical concepts.

TECHNICAL EXPERIENCE

Security Engineer | *SLK Software Services, India*

May 2018 – Oct 2022

- Delivered 15+ secure banking applications by leading end-to-end security assessments.
- Reduced vulnerabilities by 70% through SAST/DAST scans and targeted remediation; minimized exploitation risk by 75% by addressing OWASP Top 10 vulnerabilities.
- Improved security posture for 25+ clients through detailed WebInspect/AppScan audits and CVSS-based risk insights.
- Embedded security protocols into the SDLC, reducing security gaps by 20% and achieving 95% defect detection through rigorous testing.
- Recognized with the “Stellar Team Award” for significant contributions across 5 team projects.

EDUCATION

Master of Information Technology Security

Sept 2022 – Aug 2024

Ontario Tech University, Canada | GPA: 3.5 / 4.0

Bachelor of Technology in Computer Science

July 2013 – April 2017

Institute of Engineering and Technology, India | CGPA: 8.63 / 10

SKILLS & CERTIFICATIONS

Programming & Web: Java, Python, C++, JavaScript, HTML, CSS, PHP, MySQL, Data Structures & Algorithms

Cloud & Security: AWS, OWASP Top 10, NIST, ISO/IEC 27001, Network Security (IDS/IPS), Penetration Testing (Burpsuite, Wireshark, Nessus)

Operating Systems: Windows, Linux

Certifications: CompTIA Security+ (Oct 2023); Microsoft Certified: Security, Compliance and Identity Fundamentals (Oct 2023); AlgoExpert — 100 Data Structures & Algorithms Questions (Jan 2025); Preparing for Certified Ethical Hacker (CEH)

SELECTED PROJECTS (full code on GitHub: github.com/AviPama)

Full-Stack Todo App (JavaScript, 2025) — Built and deployed a full-stack task management web application, covering both front-end UI and back-end logic.

Virtual Private Cloud (VPC) Setup (AWS, Cloud Networking, 2025) — Designed a secure, segmented cloud network with public/private subnets and a bastion host for controlled access.

RBAC Implementation in AWS IAM (AWS, IAM, 2025) — Configured role-based access control policies to enforce least-privilege access across cloud resources.

Metasploit Exploitation Lab (Kali Linux, 2024) — Performed controlled exploitation of a vulnerable VM using the Metasploit Framework to demonstrate penetration testing methodology.

Bias in Sentiment Classifiers (Python, ML, Sep 2024) — Evaluated bias in SVM, logistic regression, BERT, and RoBERTa sentiment models; applied debiasing techniques to improve accuracy.

Motion Detector (Python, OpenCV, Pandas, 2024) — Built a real-time object detection tool using a webcam, with automatic entry/exit logging to CSV.

Blockchain-Based Product Tracking System (Python, Blockchain, 2023) — Built a command-line blockchain application demonstrating block creation, transaction recording, and Proof of Work.

ACHIEVEMENTS

- Gold Medalist for academic excellence in Computer Science Engineering.
- “Stellar Team Award” at SLK Software for outstanding contribution to 5 team projects.
